27-03-2025 – TASK

BY HARINI A

1.What is MSM, blueprint, live copy and rollout?

1. Multi-Site Manager (MSM)

- MSM allows you to create, manage, and maintain multiple websites by sharing and synchronizing content.
- It reduces redundant work by enabling content inheritance from a **Blueprint** to multiple **Live Copies**.

2. Blueprint

- A **Blueprint** is the **source** from which content is copied and managed across multiple sites.
- It acts as a **template** that helps replicate content across various **Live Copies**.
- When the **Blueprint** content changes, those changes can be **rolled out** to all linked **Live Copies**.

3. Live Copy

- A **Live Copy** is a page (or set of pages) that is created from a **Blueprint** and inherits its content.
- The **Live Copy** can be updated automatically or manually when the **Blueprint** is modified.
- Inheritance can be **canceled** for specific content if needed (decoupling it from the Blueprint).

4. Rollout

- **Rollout** is the process of propagating changes from a **Blueprint** to its corresponding **Live Copies**.

- It ensures that updates made to the **Blueprint** are reflected across all dependent pages.
- Rollout can be triggered **manually** or configured for **automatic synchronization**.

Example Use Case

- Suppose you have a global website (Blueprint) and need to maintain versions for different countries (Live Copies).
- Any updates to the global content can be **rolled out** to all country-specific sites while allowing regional customizations.

2.what is language copy?

Language Copy in AEM

A **Language Copy** in **Adobe Experience Manager (AEM)** is a localized version of a website created to support multiple languages. It allows content authors to manage translations efficiently while keeping the structure of the site consistent across different languages.

## Key Features of Language Copy

1. **Translation Management**
   a. Language copies enable the creation of pages in different languages based on a source language.
   b. It helps in maintaining a consistent structure across all language versions.
2. **Content Synchronization**
   a. Unlike **Live Copy** (which inherits from a Blueprint), Language Copy does not have automatic inheritance.
   b. Updates in the source language do **not** automatically sync with the translated versions.
3. **Use of Translation Projects**

a. AEM provides **Translation Projects** to manage the translation workflow.
b. Content can be translated manually or via third-party translation services.
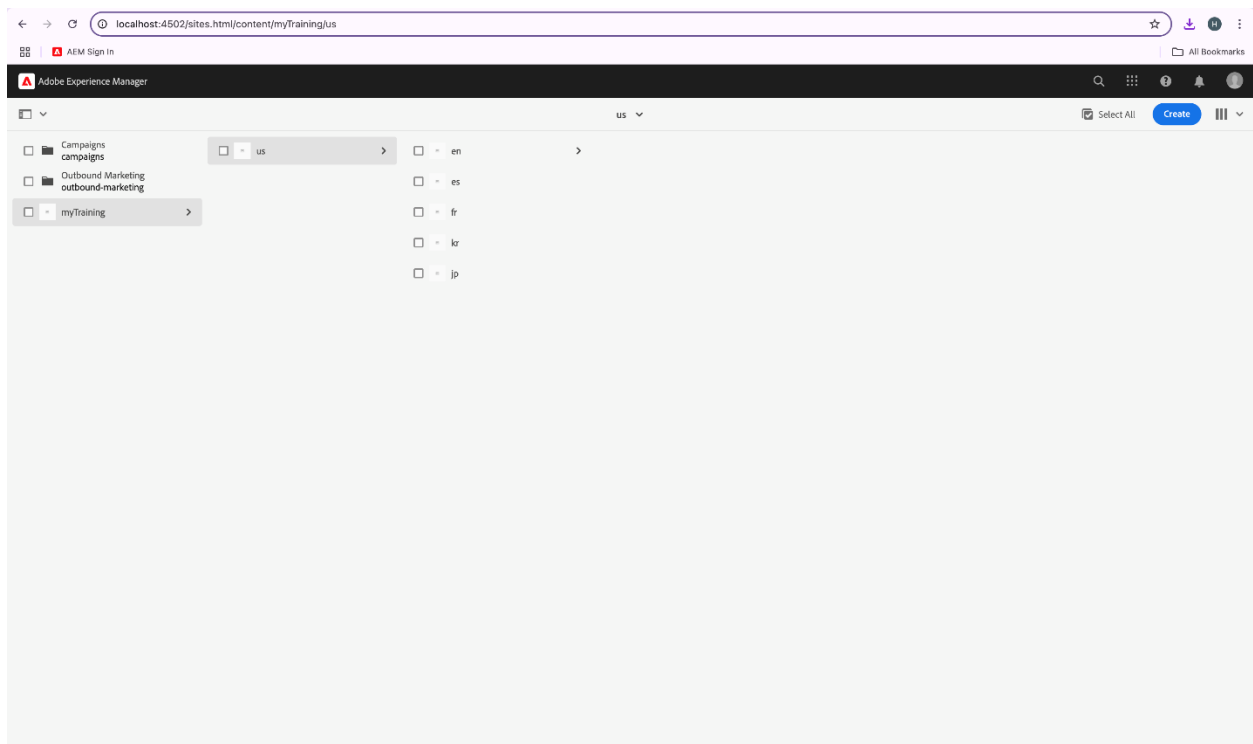

3.Create a site using MSM and us en should be source.
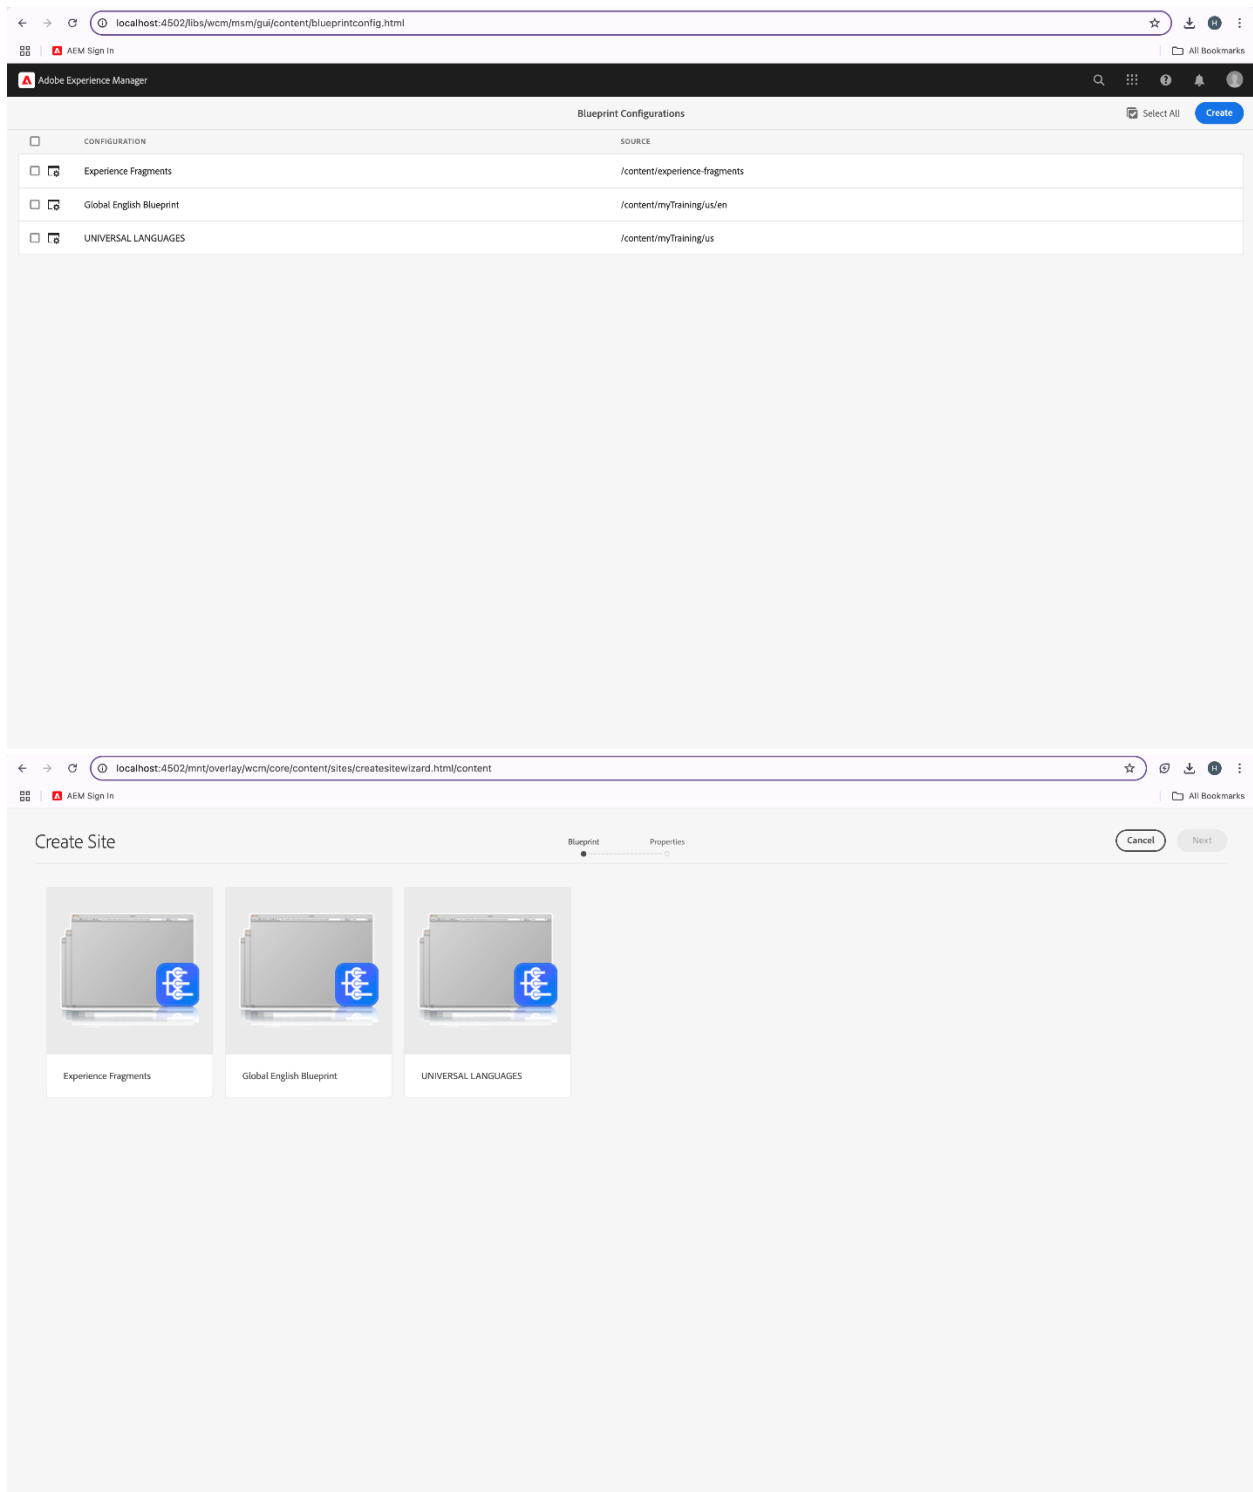

4.Create this page https://www.pinterest.com/#shop and author the page using components use the content/images from above page.
